

Synthetic LP/QP benchmark: OSQP versus direct NVIDIA cuOpt

End-to-end medians; seed IQR bands | CPU: Intel(R) Xeon(R) 6530P | GPU: NVIDIA RTX PRO 6000 Blackwell Server Edition, 595.71.05, 97887 MiB | x marks excluded failures/timeouts

Measured conclusions

Small problems: OSQP was faster for the plurality of measured families.

Large problems: cuOpt led for the plurality; crossover occurred for LP-RANGED, LP-MIXED, QP-SPARSE-COUPLED.

Amortized updates: OSQP/cuOpt speedup was 0.014x; OSQP was faster.

Family	Largest n	E2E speedup	Faster
LP-RANGED	3000	2.75x	cuOpt
LP-MIXED	10000	29.5x	cuOpt
QP-DIAGONAL	10000	0.809x	OSQP
QP-SPARSE-COUPLED	10000	15x	cuOpt
